Analytical Report from Breath Gas Values

Type of Test Performed: Small Intestinal Bacterial Overgrowth (SIBO)  
LACTULOSE

Graphical Representation

For a proper diagnosis, your physician must review this information supplemented with clinical information that is accessible to BreathTrackers, Inc. The physician must be aware of clinical factors that may affect the interpretation of the test prior to concluding a final diagnosis based on these results.

Hydrogen (H<sub>2</sub>) and Methane (CH<sub>4</sub>) values reported are based on CO<sub>2</sub> content in the sample. CO<sub>2</sub> is not used for diagnosis, only for quality assurance of samples. Normal is based on comparable safe levels as in routine analysis of typically good samples are around 1.0% CO<sub>2</sub>. Poor samples are typically below 1.0%. If the sample is considered "poor" the charted result cannot be determined accurately due to contamination of the sample. This does not mean your test is fraudulent in all cases.

**BreathTrackers, Inc. analyzed the breath samples provided by customer.**

**No diagnosis is being made by BreathTrackers and therefore, shall not be held liable for any further interpretation, final assay decision, or medical treatment provided by physicians to their patients based on these results.**
